Hiring Bias Detection Report

Generated on: May 19, 2026

This report was generated by BiasLens, a hiring bias detection tool. It analyzes hiring data using the 80% rule for disparate impact to identify demographic groups that may be facing unfair treatment in the hiring process. Each finding includes an AI-generated plain-English explanation.

Summary

Demographic categories analyzed: 3

Total groups analyzed: 7

Groups with bias detected: 3

Groups with no bias: 4

Flagged Groups

- Female (gender) - Success rate: 0.0%
- Black (race) - Success rate: 40.0%
- Hispanic (race) - Success rate: 40.0%

Analysis: Race

White (race)

White candidates were hired at a 60% rate, which is the highest success rate among racial groups and serves as the benchmark for comparison.

Black (race)

Black candidates were hired at a 40% rate, which falls below the 80% threshold when compared to White candidates, suggesting potential bias in the hiring process.

Hispanic (race)

Hispanic candidates were hired at a 40% rate, which falls below the 80% threshold when compared to White candidates, suggesting potential bias in the hiring process.

Analysis: Education

Bachelors (education)

Candidates with a Bachelor's degree were hired at a 50% rate, matching the success rate of those with a Master's degree and showing no bias based on this education level.

Masters (education)

Candidates with a Master's degree were hired at a 50% rate, matching the success rate of those with a Bachelor's degree and showing no bias based on this education level.

Analysis: Gender

Male (gender)

Male candidates were hired at a 100% rate, which is the highest success rate in the dataset and shows no sign of bias in this category.

Female (gender)

Female candidates were hired at a 0% rate, which is significantly below the 80% threshold needed to show fair treatment compared to the best-performing group, indicating potential bias.
